

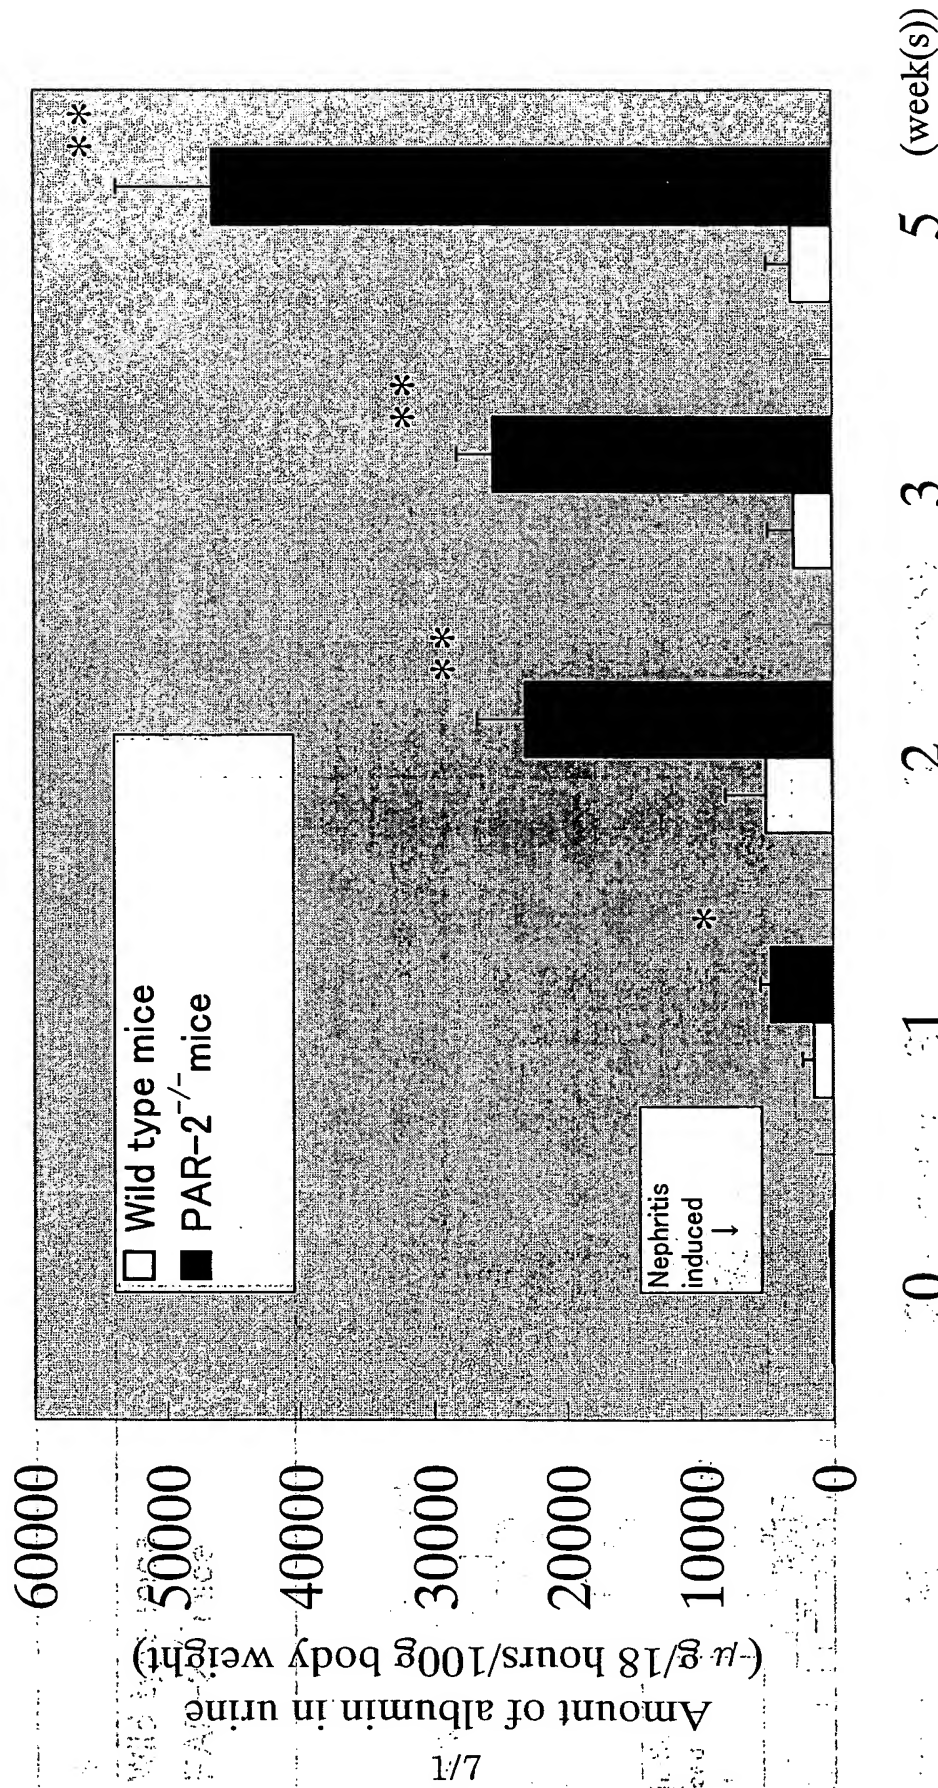

Figure 1

Changes with the passage of time of amount of albumin in urine of mice where nephritis was induced in mice where nephritis was induced.

\*p < 0.05, \*\*p < 0.01 (to the wild type mice)

Figure 2 (a)

Figure 2 (b)

induced nephritis was induced. mice PAS-positive substances in mice (after five weeks) where

Each value shows mean value  $\pm$  standard error. (to the wild type mice)  $p < 0.01$  (\*\*)

Figure 3 (b)

Damage of Bowman's capsule in mice (after five weeks) where  
 nephritis was induced.

Each value shows mean value  $\pm$  standard error.  
 (to the wild type mice)  $p < 0.01$  (\*\*)

# Effect of PAR-2 activating agent on experimental nephritis models.

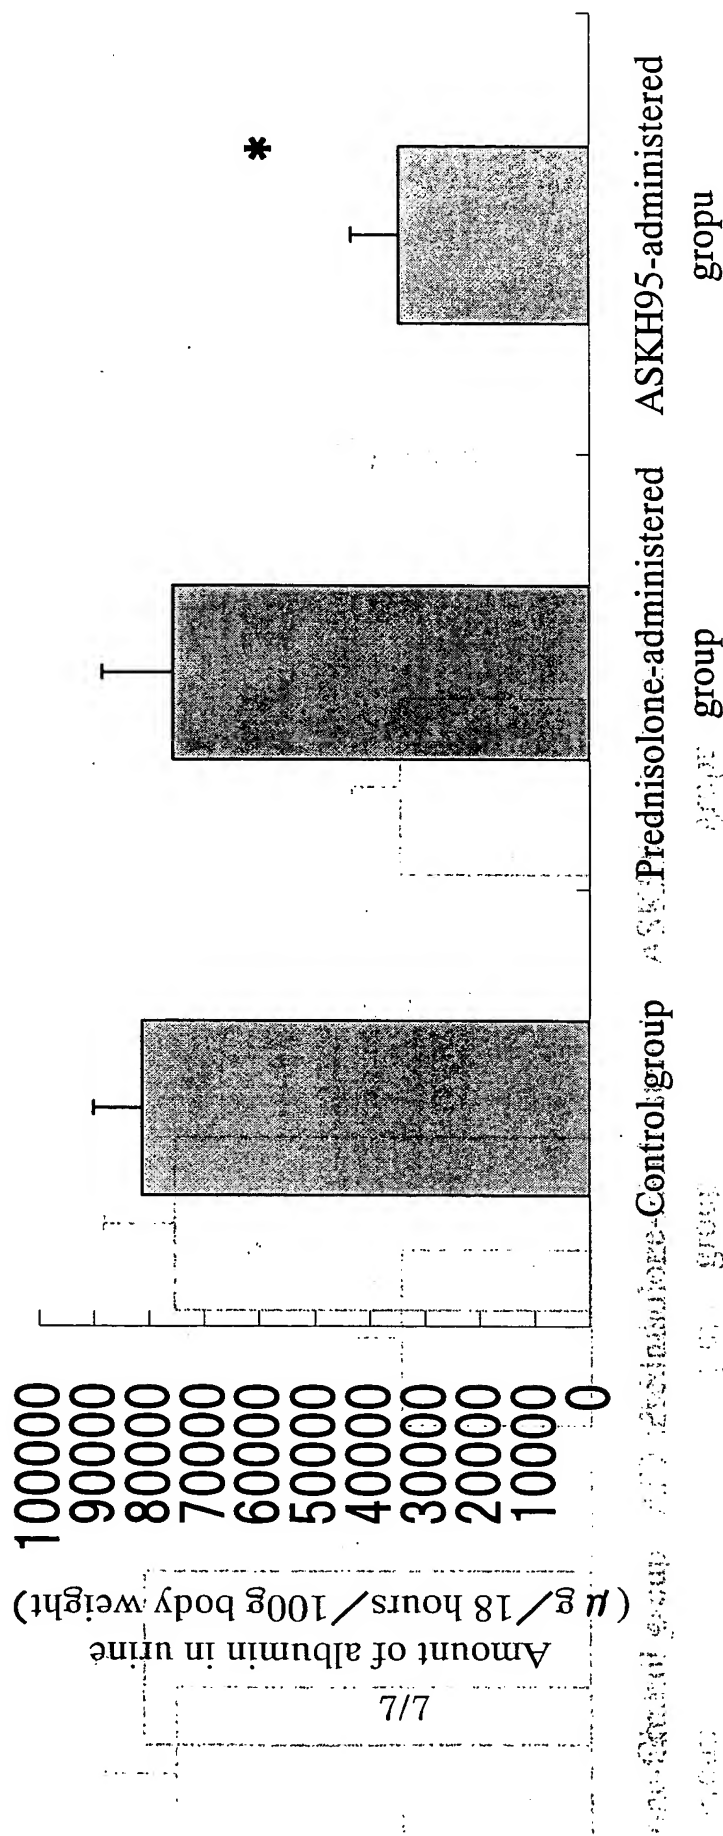

The value shows mean value  $\pm$  standard error.

\*\*: $p < 0.01$  (to the control group)

++: $p < 0.01$ , +: $p < 0.05$  (to the prednisolone-administrated group)

Figure 5

Effect of ASKH95 on experimental nephritis models.

The value shows mean value ± standard error.

\*: p < 0.05 (to the control group)
